Q: How to apply faceted search in solr I am using Solr 4.3.0,I am new to search technology.I have requirement where I need to search all the content that is in two different collections(one is in Solr and the other one is not in solr) on several attributes(attributes are not fixed and are dependant on the input).So I have to make a search in solr that shows the searched result in the solr itself and that also show the results of that search in the other collection that is not in solr.I tried googling but didn't get any clue. Is there any way to make that search on Solr 4.3.0? Can we use solr client to apply that kind of search? If yes then please give me some reference A: Sure, this is what SOLR is meant to do. Your question is a bit vague and open-ended. You can make a simple DSL query in any language that supports HTTP
