
When It Falls Free Download

===== When It Falls is a small, beautiful Win 7 theme specially designed to enhance your desktop with a vintage looking nature image. If you like both nature and whatever is vintage, then give When It Falls a try and see how it goes. Here are some of the neat features and their explanations: ===== * Latest News The right pane of this workspace has an example of an element that was just updated (you'll recognize that "last updated" date in the corner). You can also see the latest important news in the right sidebar. ===== * Photos This feature works great with the when-it-falls images, but you can use any Flickr photo as well. You will probably need to have your cursor hover over the image for a few seconds to get the preview to show up, but once you see it you'll love it. You can also zoom the preview image in with the mouse wheel (or two clicks on the wheel to move to zoom in) And if you don't want the border to show, you can turn that off too with a right click -----
----- Features: ===== * There are 4 elements in the list that you can set. 1 - Draw Widget This element can be used to draw any shape you want. It is very easy to use and each shape can be saved as a.bmp file. There are 6 different shapes available in the current version of this workspace. A shape is added when you mark the "Add this shape" button. To save your current drawing, left click the shape you want, then right click (or press ctrl+s) and save the file That's it. 2 - Text Box This is the default option and shows an element like a text box window. 3 - Full Window (for drawing elements) This is also the default option and shows a canvas window. You can also paint on this and save those colors as.bmp files. 4 - No Shapes, no Hover If you wish to have no windows at all or an element without the shapes and the hover option, you should choose this one. 5 - No Windows, no Hover A default

What's New In?

When It Falls is a small, beautiful Win 7 theme specially designed to enhance your desktop with a vintage looking nature image. If you like both nature and whatever is vintage, then give When It Falls a try and see how it goes. When It Falls offers a simple, elegant way to add a decorative splash of nature to your desktop. With its small size, When It Falls is a very light, not so intrusive theme that blends in quietly with the rest of your desktop. When It Falls offers a few items that change the look of your screen. The original screen image is a small, 200x200 pixel file. A larger image is also included (1.5MB). You can also specify the size of the snapshot (either 200x200 or 400x400). You can even turn on the "Who's Watching" option (also known as the "Peeping Tom" mode). When it's turned on, the snapshot function is available from all your applications, even the desktop. The snapshot is generated when you hit a key on your keyboard. A snapshot will be generated for a period of about 30 seconds. This is similar to the operation of a digital camera. When it's turned on, you'll notice the moment a snapshot is taken in your screen. When It Falls will then show you where it is on your desktop, who is watching it and how long it will take until it is destroyed. If you like it, just hit enter and you'll have a new desktop splash. If you don't like it, hit ctrl+alt+del and it will be gone. When It Falls is a small, beautiful Win 7 theme specially designed to enhance your desktop with a vintage looking nature image. If you like both nature and whatever is vintage, then give When It Falls a try and see how it goes. Double click on the downloaded file to install the theme. If you are using Windows Vista or Windows 7 download the Windows SOT file from the link below: Note:In order to be able to use this program, you will need to download the proper version of Curimba Explorer (either 2007 or 2011). Screen Shots I get the question to have one when it comes to when it falls but i have tried and it never worked how do i install it and what do i need to get it to work on my pc? If you have any problems installing the theme, please try one of the following fixes: Windows -Make
